

Policies

Collaboration

You are welcome and encouraged to collaborate on Prepares, class work/participation, and Homeworks. You can find study partners by seeking some out in class or in the discussion forum. However, you should not “split up” the work and only look at a portion of the material, as this will deprive you and your partner of valuable learning opportunities. Instead, we encourage you to work together actively or each attempt it independently and then come together to discuss. **Submitting an identical file/writing/code with your partner(s) is considered a violation of the [Duke Community Standard](#) and will be reported to the conduct office.** You should also not share your solutions with anyone you do not actually study/work with.

You must complete the in-person exam independently and the Practicum should only be done and discussed with your partner. You should not discuss them with any other classmates until after grades have been returned. You may not show your solutions to other students and should not view other solutions. Doing so will be considered a violation of the [Duke Community Standard](#).

The group projects will be completed in groups, and while some group members may focus on different aspects of the project, all group members should be actively engaged in the overall project, each doing a fair share of work, and regularly communicating with group members.

Using AI

This class considers AI or large language model (LLM) usage on par with collaboration with another person (though they do not count as an actual person in your group). This means you may use them with Prepares and Homeworks. In class activities make less sense, so if you do, let the professor know she's curious how that would work. You may use AI with your project to help you generate ideas and code. The same is true for the Practicum. But you should not assume it is correct. You and your group take ultimate responsibility for the quality of the work you submit.

If you use AI, you must disclose how you used it using the [Artificial Intelligence Disclosure \(AID\) Framework](#). Your disclosure must have the *Artificial Intelligence Tool(s)*: header and at least one other header.

Finally, the usage of AI is new. We do not know the best practices for its use in your learning. Therefore, you should take care not to let it short-circuit your learning, where it becomes a crutch that you cannot function without.

CS216 Specific AID Headers and Definitions

The [Artificial Intelligence Disclosure \(AID\) Framework](#) is focused on research, and therefore, its definitions are useful for your project. However, for other things, such as homework, it is less ideal. Therefore, below is a subset of headers from the framework OR new headers and definitions contextualized for this course.

- *Artificial Intelligence Tool(s)*: The tool(s) and the versions of those tools used. Should also note any known biases or limitations of the models or data sets.
- *Code generation*: Using AI to generate code from a text description. How much of the text was written by you versus copied and pasted from existing course materials (such as question text)* should be stated. If course materials were copied and pasted in, what and how much text should be stated.

- *Debugging*: Using AI to help fix existing code so that it works. Should state how it was used for this purpose.
- *Learning*: Using AI to assist in understanding/breaking down concepts/code.
- *Writing—Generation*: Using AI to write text that you then copy as part of your answer. You should state how much you edited the text, such as [none, minimal, some, substantial]
- *Writing—Review & Editing*: Using AI to suggest revisions and edits to text written by you.

* Under some circumstances, it is okay to copy things like question text into AI. For example, after answering the question yourself, you could paste both the question text and your answer into AI and ask it for feedback. Pasting the question text in and asking AI to generate an answer that you then claim as your own work cheats your learning and is strongly discouraged.

Examples

Artificial Intelligence Tools: ChatGPT v5 via chatgpt.com. *Conceptualization*: I gave ChatGPT the election dataset and asked it for ideas for interesting statistics I could extract from it. *Methodology*: I asked it for help on how to write the code to get the statistic I chose, but I wrote the code myself. *Writing—Review & Editing*: I wrote my explanation of what the statistic meant, then gave ChatGPT the text and the rubric and asked it to provide feedback on how to update the explanation to conform to the rubric.

Artificial Intelligence Tools: ChatGPT v4o via DukeGPT. *Information Collection*: DukeGPT was used to find the function needed to get the index value of the maximum value of a Series and the syntax needed to filter rows in a pandas dataframe using multiple columns. *Debugging*: DukeGPT was used to help me find a bug in my code for Q1. I copied in the code and error, stated what the code should do, and asked for it to explain why the error was happening and suggest fixes. I then implemented the fix myself.

Missing Class

Missing class happens and is often outside of your control. Our goal is to work with you so that missing class does not harm your learning nor your grade.

If you are missing an in-person exam or the Practicum and want to make it up, then you need to file an [Incapacitation Form](#). Note that for the in-person exam, a retake is available during the final exam period. Sometimes, it's better to rest and avoid putting extra pressure on yourself to do everything. So, missing it can be a worthwhile tradeoff.

If you are missing a regular class day, a simple email saying "I won't be in class today" would be appreciated, but is not required. If this becomes a pattern, we will email you asking how things are going because missing a lot of class is unusual. Otherwise, you will not be able to make up the class engagement points associated with coming to class. However, keep in mind that there are other ways to earn class engagement points.

Attending Class Online

Current evidence from this class shows that online attendance is not conducive to learning compared to in-person attendance. However, online is still an option to stay committed to equity, so students can attend when factors outside their control prevent in-person attendance. Therefore, if you wish to attend class online for a particular day, you must request it via the request to attend class online form. You can find the form on the [forms page](#). If you believe you have a reasonable argument why you should be allowed to consistently attend online, please contact the professor.

Inclement Weather

In the event of inclement weather, I will notify you if we will have class over Zoom only. If there are connectivity-related events that prohibit online class attendance, I will notify you how we will make up missed course content and work. Asynchronous catch-up methods may apply, and we may rely on Duke's designated make-up days.

Academic Integrity

All students must adhere to the [Duke Community Standard \(DCS\)](#): Duke University has high expectations for students' scholarship and conduct. In accepting admission, students indicate their willingness to subscribe to and be governed by the rules and regulations of the university, which flow from the Duke Community Standard.

Regardless of course delivery format, it is the responsibility of all students to understand and follow all Duke policies, including academic integrity (e.g., completing one's own work, following proper citation of sources, adhering to guidance around group work projects, and more). Ignoring these requirements is a violation of the Duke Community Standard. Any questions and/or concerns regarding academic integrity can be directed to the [Office of Student Conduct and Community Standards](#) at conduct@duke.edu.

Academic Accommodation

If you are a student with a disability and need accommodations for this class, it is your responsibility to register with the [Student Disability Access Office \(SDAO\)](#) and provide them with documentation of your disability. SDAO will work with you to determine what accommodations are appropriate for your situation. Please note that accommodations are not retroactive and disability accommodations cannot be provided until a Faculty Accommodation Letter has been given to me. Please contact SDAO for more information: sdao@duke.edu or access.duke.edu.

Religious Accommodation

Students are permitted by university policy to be absent from class to observe a religious holiday. Accordingly, Trinity College of Arts & Sciences and the Pratt School of Engineering have established procedures to be followed by students for notifying their instructors of an absence necessitated by the observance of a religious holiday. **Please submit requests for religious accommodations at the beginning of the semester so that we can work to make suitable arrangements well ahead of time.** You can find the policy and relevant notification form here: <https://trinity.duke.edu/undergraduate/academic-policies/religious-holidays>
