Project Assignment 01 – Team and Project Organization
100 Points

This team assignment is intended to set up your team within the Bear Necessities Market (BNM) project within GitLab and also to familiarize yourself with GitLab. **It is critical that every team member do their part in GitLab.** In the past when students have worked in groups of between two and five, one team member “drives” in GitLab and one or more sit by the side to help. The end result of this is that it appears that all work was done by the single “driver”.

Submission: There is no Kodiak submission for this assignment as all of your work will be done in GitLab.

After submission: When you have completed this assignment, make sure to complete the team assessment. I will email each team a link to their assessment instrument.

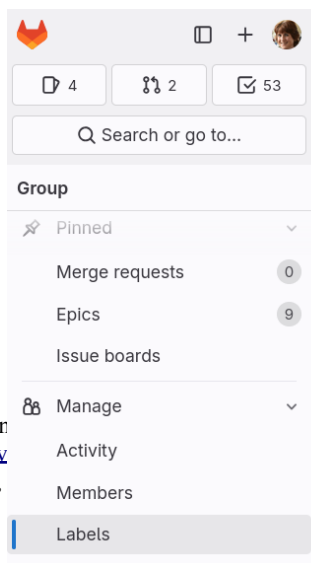

1. Each individual in the team must assess every other individual in the team **including themselves.**
2. You must include a constructive comment on the performance of each team member.

Part 1 – Create a label and board for your team

In order to operate effectively within GitLab, you will need the ability to identify work completed by your team. Therefore, you need to create a label so that you can label issues with your team name. You must also set up your team board so that issues labeled with your team name are automatically added to your issue board.

Step 1: Navigate to the Bear Necessities Market project. Labels that are created at the group level are available to all projects within that group. When you create an issue or merge request in any project within the group, you can apply these labels. If you create your label within a project, it will only be able to be applied within the project.

Step 2: Click on Manage/Labels. Review the set of labels.

Step 3: Create a label with your team name. Click on the blue New Label button in the upper right corner of the screen. Provide your team name, select a color, and click Create label. (The example is using “Best Team Ever” as the team name.) Pick a different color than existing labels and the other teams.

Your **New label** label

Title

Best Team Ever

Use `::` to create a [scoped label set](#) (eg. `priority::1`)

Description (optional)

Background color

#cd5b45

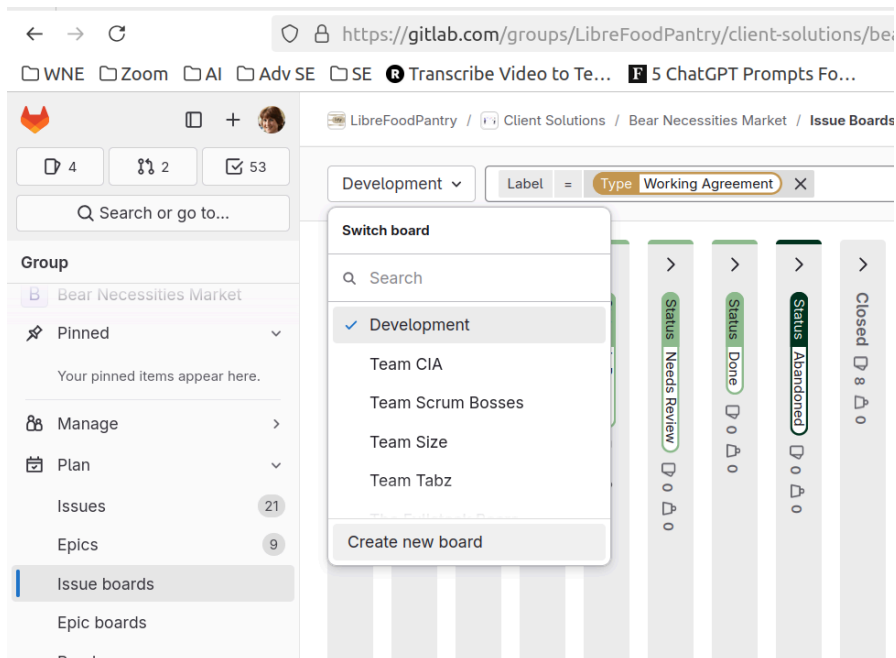

Select a color from the color picker or from the presets below.

Create label Cancel

should now appear in the list of labels.

Step 4: Create a new board with your team name.

1. Still at the Bear Necessities Market group level, on the left menu, go to Plan/Issue Boards.
2. Pull down the Development menu and select Create new board as shown below:

5. Make sure that your board is shown in the issue boards. If it is not, select your team name from the pull-down list.
6. Click the gear for ‘Configure board’ in the upper right corner. You should see your team name at the top of the popup.

7. Click 'Select labels' and select your team name from the list. This is what allows you to tag an issue with a label and have it show up on your board.

The image shows a 'Configure board' dialog box with a close button (X) in the top right corner. It has a 'Title' field containing 'Best Team Ever'. Below this is a 'List options' section with the text 'Configure which lists are shown for anyone who visits this board' and two checked checkboxes: 'Show the Open list' and 'Show the Closed list'. The 'Scope' section explains that the board scope affects which issues are displayed. A 'Select labels' sub-dialog is open, featuring a search bar, a list of labels (API, Backend, Best Team Ever, Frontend) with colored squares, and options to 'Create group label' and 'Manage group labels'. At the bottom of the main dialog are 'Weight' and 'Edit' buttons.

If you have correctly set up your board, you should be able to go to Bear Necessities Market in GitLab, click on Issue Boards, select your team name and have the board appear as shown above.

Rubric for Team Label and Board:

Correct creation of team label – 10 points

Correct set up of team board – 15 points

Part 1 Working Agreement (75 points)

When people work together, they must come to some agreement about how they will work together including how interactions will happen and guidelines for the work. In order to get the team on the same page and improve collaboration, it makes sense for the guidelines of how the team will operate be decided collaboratively by the entire team and written down to make such guidelines plain. In this part of the assignment, you must create a Working Agreement for your team.

You must:

- Create an issue in the Status: Info column of the “Development” board of the Bear Necessities Market project.

- Title the issue: “Working Agreement - <Teamname>”

- Include all of the sections defined below in this Working Agreement

- Make sure that the issue is proofed and has no spelling or formatting errors

- Warning:** Existing Working Agreements in the BNM project are incomplete and may not fulfill this part of the assignment.

Sections

Your Working Agreement must contain at least the following sections, in the order listed below. You should have sufficient bullets under each section in order to fully cover the topic. Some sections may have more bullets than others. At the end of this document are some items to seed your thinking. This is in no way a complete list.

Culture: In this section, you will define the culture of your team. Provide 2-4 positive characteristics that all team members should bring to all work.

Meetings: Describe your meeting times. Where will meetings take place? You should take notes in your meetings to document decisions and actions. Where will meeting notes be stored? Will your meeting have a format? If so, what is it? Team meetings result in work items. How will the team follow up on these work items? Describe the protocol for letting team members know if you cannot make a meeting which should happen **very rarely if ever**. Describe **consequences** of missing or late attendance at meetings.

Communication: Describe communication channels you will use. How will you communicate? Describe the expected communication pattern. Will people be required to respond within a particular time-frame?

Decisions/Conflict: Describe how decisions will be made. How will “ties” be decided? How will conflicts within the team be handled?

Development: In this section, describe how you will coordinate work to be completed. How will work be allocated? How will work be completed? I understand that you may not completely understand how the project will be developed. We will revisit this section after we have gotten into the actual project. Describe the **consequences** of work that is not completed or completed incorrectly.

Workflow: Describe how the board will be used with the working agreement. When will issues get created? Who will create them? When do issues get moved? Who will move them? What is the procedure for moving issues?

Rubric for Working Agreement:

WA in correct format including formatting and English – 10 points

Completeness and correctness of each section in the Working Agreement 10 points each – 60 point

WA in correct location – 5 points

Sample Contents – Below are some items that might be included in a team agreement to help you in your thinking. This list is only a start and each team should create their own items for each section.

Culture:

- Ask for help when we need it
- Be transparent and honest
- Participate fully
- Think creatively
- Respect and share air time

Meetings:

- Meetings will begin and end on time
- Share all relevant information
- If you miss a meeting, support decisions made in your absence
- Stay on subject; stay on task
- Observe time frames
- Keep to time and agenda
- Actively give constructive feedback
- Communicate our schedule and mark absences to the work calendar
- No side conversations
- One person talks at a time
- Take responsibility for what you need in the meeting
- Encourage everyone to participate
- Let group know your attendance plans
- Cell phones are off or on silent notification
- Share responsibility for the meeting's effectiveness; remind the group of its own guidelines if necessary

Communication:

- All communication shall occur on Discord
- All communication will be saved for at least one year
- Speak for yourself, not on behalf of others

Decisions/Conflict:

- Differences of opinion are natural and useful
- Decisions will be made by consensus vote
- All conflicts will be handled by each member presenting their opinion in turn, then the team will be asked for input, then a vote will be taken
- Discussion of conflicts will be limited to 20 minutes, if a decision is not reached within 20 minutes, a separate meeting will be scheduled to resolve the conflict.
- If any team member needs a timeout to cool off, the team will take a 15 minute break.

Development:

Link all pull requests to GitLab issues
All changes will be made to a local branch
All pull requests must be reviewed by at least one team member
All pull requests must be reviewed within one day
Branches will only be merged when all CI (continuous integration) checks pass
All changes must have sufficient automated tests
Branches will only be merged after all relevant documentation is updated
